PATCH TEST PROCEDURE

Please note that the patch test must be performed a minimum of 24 hours prior to the Treatment.

Procedure

- Hands should be cleaned and sterilised prior to performing the patch test. An antibacterial hand wipe is provided for you for this reason :)
- Clean area behind the ear with the alcohol swab provided.
- Dip the cotton bud into coloured pigment and rub a small amount behind the ear (Avoid contact with clothes as pigment may stain)
- Dab Cotton bud into yellow ointment (aftercare balm) and rub into a clean area of the skin behind the ear
- Leave these in contact with the skin for 24 hours.

Please Note

- This form must be completed, signed and dated and returned to us prior to the treatment. Without the completed form, we will not be able to carry out the treatment.
- The pigments we use fully comply and conform to EU regulations and therefore are highly unlikely to cause any undesired effect. Should you however believe you are experiencing a reaction then please seek immediate medical attention.

I can confirm that a patch test has been carried out as specified within this form and that no reaction whatsoever arose because of it, either during or after it.
